

## Lean Six Sigma Champion Training

Give leaders the skills they need to drive results for your Lean Six Sigma program

Lean Six Sigma Champion training gives corporate leaders the skills they need to pave the way for Lean Six Sigma's success within an organization. Champions act as change agents by selecting and defining projects, mentoring Black Belts and ensuring that Six Sigma remains well-aligned with the company's strategic goals.

Meaningful Lean Six Sigma change can only come about if Champions are properly prepared to guide and support Six Sigma practitioners. Knowing how to fill the project pipeline with viable projects and then driving these projects to produce ongoing results is the primary role of Champions.

"Champion training was engaging and provided real life examples. It was three days very well spent."

-- John Griffin, Champion Standard Register

### Course Description

BMGI's three-day Champion Program gives business leaders the skills they need to drive financial results. The three-day course starts with an overview of Lean Six Sigma and the DMAIC methodology. From there, class participants spend a significant amount of time talking about Lean Six Sigma projects and specifically how to recognize, prioritize, scope and define them. Special attention is paid to understanding what is, and more importantly, what is not, a Lean Six Sigma project.

In the classroom, participants are provided with a series of templates and guidelines to aid in meeting their objectives. Additionally, a simulation exercise is used to demonstrate DMAIC tools. Finally, participants learn what steps are necessary to build a Six Sigma infrastructure. This includes techniques used to engage support functions such as Finance, Human Resources and Information Technology to build the necessary governance for Lean Six Sigma.

The program includes a highly interactive day of hands-on project selection, conducted in workshop and breakout formats. It also incorporates group and/or one-on-one Q & A session(s). These sessions are ideal for helping potential deployment leaders structure customized alternatives for implementing Lean Six Sigma.

### AT A GLANCE

**Course Length:**  
3 consecutive days.

**Who Should Attend:**  
Managers looking for an in-depth introduction to Lean Six Sigma.

**Course Includes:**  
Microsoft Excel and Word-based templates.

### Agenda
